## Part# SG200TDE

The bottom of the dummy engine is noted by the “missing” bolt on the aft edge of the “engine” as seen in the photo (arrow).

Trim or remove material as required to suit your installation.

**NOTE: Exercise caution around the sharp edges that you create by trimming!**

After you are done fitting it to your hull, install the scatter blanket by applying a small amount of hot glue or similar to the top of the can. Align the blanket to the aft end of the as seen in the photo. Wrap the blanket around the can and trimmed areas and hot glue to inside of can. Wrap and glue the straps around to match.
